
Request for advice of 20.01.2012 on the safety situation in the Asse II mine

Regarding the assessment of the safety situation in the Asse II and the risks associated with the implementation of retrieval, the BMU asks the ESK for a statement on the following questions:

1. What possibilities for accelerating the realisation of retrieval are feasible without compromising on safety?
2. Can planning and implementation of the emergency and precautionary measures be accelerated and optimised?

The consultations on these issues took place in the ESK and in the ESK/SSK ad hoc working group ASSE. For this request of advice, [ESK statement](#) of 02.02.2012 is available.
